

RollerVision.

Seeing is Believing. Effortlessly Manage Multiple Monitors for Proper Focal Depth.

More monitors can mean more stress and strain on your team. That's why we created RollerVision to position all monitors in an array that creates the optimal focal depth to each monitor, with the proper viewing angles. RollerVision easily glides to move all monitors at the same time to the right position.

The entire RollerVision system effectively manages cables while providing easy access to monitors and their ports.

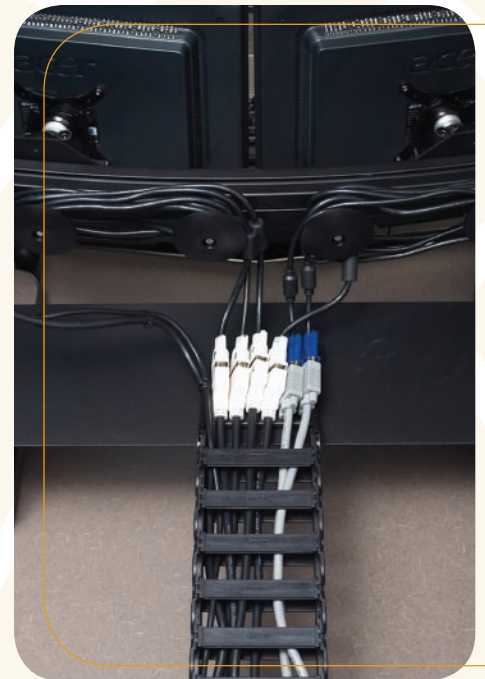

And we've gone vertical with QuickStack – a simple, easy way to stack monitors with little more than a few turns of the screwdriver.

Experience the difference the most integrated, complete monitor management system provides.

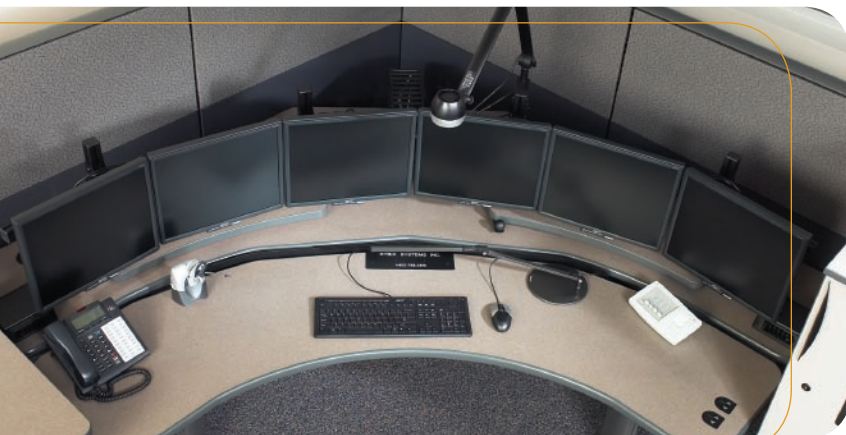

Key Concepts / Benefits

Benefits

- All monitors move simultaneously to achieve the optimal focal depth for each individual user
- Reduced eye strain through equal focal depths to all monitors using Xybix's Radial Monitor Array
- Easily add monitors to the array
- Smooth, whisper-quiet gliding operation
- Conceal and manage cabling for network to data, power and more
- Enhanced weight capacity to support current and future advanced displays

With CableRound-Up, monitor cables are out of sight and out of mind, yet easy to access for on-the-fly maintenance.

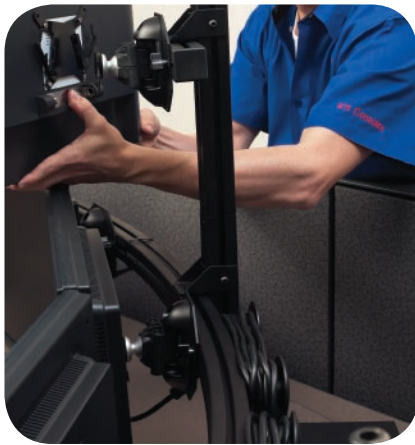

Form • Function • Health • Performance

Differentiators

🌐 The Xybix Difference

- Patent-pending, innovative design is flexible and durable for virtually any number of monitors required in a single furniture system
- Enables mounting of different size monitors in both landscape & portrait configurations
- Rolls smoothly on industrial grade polyurethane wheels
- Designed with clearance for centrally located electronic equipment
- Fully-integrated into design and function of entire Xybix furniture system
- Quick-release monitor mounts for easy changeover

Go ahead and stack 'em high, with RollerVision QuickStack. Monitors simply attach to Xybix's monitor array system so they are managed and move as one.

Xybix's Energy Chain keeps RollerVision moving with ease enabling your cabling to stay secure and tidy.

Xybix's RollerVision keeps all monitors united and correctly positioned to ensure proper focal depth from the worker's position – seated or standing.

Features/Components

🌐 Monitor Array System

- Strong light aluminum mounting system for multiple monitors
- Easy access to all monitor cable endpoints
- Quick-release mounts for ease of service or replacement
- Appropriate-sized power strips to eliminate cable clutter

🌐 Wheels

- Smooth gliding polyurethane ball bearing wheels

🌐 QuickStack

- Easily stack monitors vertically with simple drop-in mounts

🌐 CableRound-Up

- Neat and easy solution to excess cabling
